**PACTware™ on the Road Again**

Manufacturer-Independent Device Operation for Process Automation.

This October, PACTware experts will be travelling to the US to broaden the scope and awareness of PACTware. The seminars will focus on the benefits of PACTware, the group will showcase how the frame application will enhance device operation through the entire life cycle of a device.

*The Roadshow is making two stops:*
- Houston, TX; Oct. 17., 2012
- New Orleans, LA; Oct. 22., 2012

Lunch is included with your complementary registration.

The half day events will kick off with an overview of the technology, followed by user-oriented, vendor neutral workshops focusing on operation and maintenance benefits including:

- Showcasing how configuration of a device is made easier,
- Illustrating how advanced diagnostics enhances predictive maintenance and troubleshooting – while at the same time increasing productivity and making life of a plant engineer a little easier.
- network with their peers and PACTware experts at table tops showcasing the latest equipment available from leading manufacturers.

A multi-vendor demo wall will be on display, featuring numerous application examples, showing first-hand how device access can be considerably facilitated and accelerated by using a single tool for all networks and field devices communicating via HART, PROFIBUS and FOUNDATION Fieldbus.

The events are sponsored by the leading manufacturers in the industry including; Bopp & Reuther, CodeWrights, ICS, Invensys Foxboro Eckardt, KROHNE, Pepperl+Fuchs, Trebing & Himstedt and VEGA exhibiting their FDT based devices on table tops.

The Roadshow is supported by the FDT Group and Softing (providing its FF link master).
